

PRESS RELEASE

**NEXT LEVEL SECURITY SYSTEMS ANNOUNCES
INTEGRATION WITH AXIS NETWORK DOOR CONTROLLER**

Integration with AXIS A1001 Network Door Controller delivers ease-of-use, correlated security data

Carlsbad, Calif. – September 25, 2013 – Next Level Security Systems, a provider of a new breed of unified, networked security solutions, today announced a new integration between the company's award-winning unified security management platform, and access control solutions from Axis Communications. As a result of the integration, the NLSS Gateway will seamlessly communicate with AXIS A1001 Network Door Controller to further augment the Gateway's access control, video surveillance, alarm management and intelligent video capabilities.

Next Level's integration with Axis' new door controller, launched at ASIS International 2013, allows the NLSS Gateway to directly interface with access control functionality provided by AXIS A1001 door controller. The integration will bring end-users the ability to cost effectively implement online access control on all doorways throughout their facility. Access control information is then automatically correlated with other built-in functionalities including video surveillance. Together, video, access control and alarm data work in conjunction to identify and alert against potentially harmful activity including break-ins and tailgating. The networked-based infrastructure of the AXIS A1001 and Next Level Gateway streamlines installation time and limits complex management structures.

AXIS A1001 Network Door Controller is an open, non-proprietary platform for access control management that meets the requirements of small installations as well as advanced enterprise systems. The use of IP, standard IT equipment and the powerful API makes AXIS A1001 a scalable and future-proof solution that can easily integrate with other systems and components. The controller supports most reader types and is fitted with configurable input/outputs as well as controllable high power outputs for external equipment such as door locks and positioning sensors.

The NLSS Gateway delivers the significant advantages of unified security operations through a security management platform that combines video management, access control, video analytics and intrusion into a single, easy-to-use networked platform. The Gateway features 13 built-in video analytics, including forensic analytics, facial recognition and audio analytics, and multiple Gateways can be combined for distributive processing and a truly scalable solution. Integration with the Axis door controller will be

supported in NLSS Gateway version 4.0 and later, and will be available for sale in Q4, 2013.

“Support for Axis’ access control solutions is an essential step to providing customers with a comprehensive view of their entire security infrastructure,” said Bill Jacobs, Vice President of Access Control, Next Level Security Systems. “Our unified approach enables the AXIS A1001 door controllers to be managed and controlled through our intuitive user interface, leading to simpler configuration and management, and a higher return-on-investment.”

“Axis enters the access control market with the same mindset that helped revolutionize video surveillance: create an IP-based, open platform that empowers integrators and end-customers to build intelligent, integrated and scalable systems with the technologies that work best of their specific needs,” said Fredrik Nilsson, general manager, Axis Communications, Inc. “Having the ability to integrate Next Level’s NLSS Gateway completes this vision by delivering a truly unified security platform for our joint customers.”

The NLSS Gateway is available for one inclusive price with no licensing fees. Contact sales@nlss.com for further information.

About Next Level Security Systems

[Next Level Security Systems](#) is a physical security company delivering a new breed of unified networked security technologies. The NLSS Gateway, Next Level’s flagship product, is an award-winning, IP-based security management platform that integrates video management, IP access control, video analytics and managed services into a single appliance. It is successfully used in the retail, commercial, education, transportation and government markets. All of Next Level’s products, sold through distribution worldwide, combine the performance, sophistication and functionality of enterprise-class security systems into a compact, unified and affordable solution.
